Calibration Chart for DeltaTron® Accelerometer Type 4397 A

Serial No.: 2258425

Brüel & Kjær

Reference Sensitivity 1) at 159.2 Hz ($\omega = 1000 \text{ s}^{-1}$), 20 ms⁻² RMS.

1.002 mV/ms-2 (4 mA supply current and 22 °C: 9.83 mV/a) Frequency Range: 1 Hz to 25 kHz

Amplitude (±10%): Phase (± 5°):

4 Hz to 2.5 kHz

Mounted Resonance Frequency:

53 kHz

Transverse Sensitivity 2): Maximum (at 30 Hz, 100 ms⁻²): Angle of minimum, α : (see drawing)

0.6 % re Reference Sensitivity 10

Transverse Resonance Frequency:

17 kHz

Calculated values for TEDS 3):

55.3 kHz Resonance frequency: Quality factor @ fres: 90 -1.9%/decade Amplitude slope:

High pass cut-off frequency: 0.02 Hz Low pass cut-off frequency: 40 kHz

Measuring Range: T < 100°C: T < 125°C: ± 7500 ms⁻² peak (± 750 g peak) ± 5000 ms⁻² peak (± 500 g peak)

Polarity of the electrical signal is positive for an acceleration in the direction of the arrow on the drawing.

¹³This calibration is obtained on a modified Brüel & Kjær Calibration System Type 9610 System No.: 150117.3 and is traceable (amplitude only) to the National Institute of Standards and Technology, USA and Physikalisch-Technische Bundesanstalt, Germany.

The expanded uncertainty 5 Hz to 4 kHz; 1.0%, 4 kHz to 7 kHz; 1.4% and 7 kHz to 10 kHz; 2.0% is determined in accordance with EAL-R2. A coverage factor k=2 is used. This corresponds to a coverage probability of 95% for a normal distribution.

2) The uncertainty is 0.3% of Reference Sensitivity and 5° on the angle.

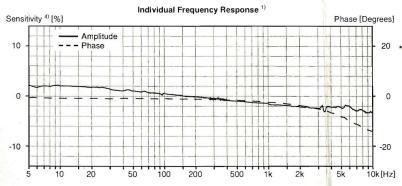

3) Transducer Electronic Data Sheet according to IEEE P1451.4. Built-in ID-information not included.

4) Deviation from Reference Sensitivity.

For further information, please see http://www.bksv.com and Product Data Sheet BP 1288 and BP 1849

Electrical:

Bias Voltage: at 25°C and 4 mA: + 12 V ± 0.5 V at full temperature and current range: + 8 V to + 15 V

Power Supply requirements: Constant Current: T < 100°C: + 2 to + 20 mA T < 125°C: + 2 to + 10 mA

> Unloaded Supply Voltage: + 24 V to + 30 V

Output Impedance:

Start-up time (to final bias ± 10%):

Inherent Noise (RMS):

Broadband (1 Hz to 22 kHz):

corresponding to < 0.015 ms⁻² (< 1500 µg) 10 Hz: 7.9x10⁻⁴ ms⁻²/√Hz (79 µg/√Hz)

Spectral: 2.1x10-4 ms-2/VHz (21 µg/√Hz) 100 Hz: 1000 Hz: 1.4x10-4 ms-2/VHz (14 µg/√Hz)

Ground Loops can introduce error signals. These can be avoided by insulating the accelerometer from the mounting surface using Insulating Stud UA 1216.

Recommended cable:

Mounting Technique:

Examine the mounting surface for cleanliness and smoothness.

Sensitivity 4) [%]

10

0

-10

If necessary, machine surface to a flatness < 10 μm and a roughness < 2 μm. Fasten the accelerometer using the appropriate stud. Take care not to exceed the recommended mounting torque and that the stud does not bottom in the mounting

A thin film of oil or grease between the accelerometer and the mounting surface helps achieve good contact and improves mounting stiffness.

See also ISO 5348. For other types of mounting, see the Brüel & Kiær handbook "Piezoelectric Accelerometers and Vibration Preamplifiers" (available from your local Brüel & Kiær representative).

Typical Low Frequency Response

10 20

Environmental:

- 50 to + 125°C (- 58 to + 257°F) Temperature Range:

Temperature Coefficient of Sensitivity:

+ 0.05%/°C 2 ms⁻²/°C

Temp. Transient Sensitivity (3 Hz Low. Lim. Frg. (-3 dB, 6 dB/oct)):

Magnetic Sensitivity (50 Hz, 0.038 T):

50 ms⁻²/T

Acoustic Sensitivity (154 dB SPL):

0.01 ms⁻²

Base Strain Sensitivity (at 250 µE in base plane):

0.005 ms⁻²/ue

Max. Non-destructive Shock:

Axial: 100 kms⁻² peak (10000 g peak)

Transverse: 50 kms⁻² peak (5000 g peak)

Humidity:
